# Basic Page Design

```
<!doctype html>
<html>
  <head>
    <title> Title </title>
  </head>
  <body>
    <div class="maincontainer">
      </div>
  </body>
</html>
```

# Code Part

index.html

```
<!doctype html>
<html>
  <head>
    <meta charset="utf-8">
    <title>ABC</title>
    <link rel="stylesheet" href="css/style.css">
  </head>
  <body>
    <div class="maincontainer">
      <div class="header">
        <div class="logo">
          
        </div>
        <div class="phonenumber">
          Phone number
        </div>
        <div class="clear"></div>
      </div>
      <div class="banner">
        
      </div>
      <div class="bodysection">
        <h1>Heading Part</h1>
        <p>Lorem Ipsum, filler</p>
        <div class="pic">
          
          :
        </div>
      </div>
      <div class="footer">Footer Part</div>
    </div>
  </body>
</html>
```

```

body {
padding: 0;
margin: 0;
font-size: 17px;
color: #000;
line-height: 1.4em;
font-family: Arial;
background: #e3a900;
}

img {
max-width: 100%;
}

.maincontainer {
width: 1250px;
margin: 0 auto;
background: #fff;
padding: 15px 15px 0px 15px;
}

header {
padding: 25px;
}

.logo {
float: left;
padding: 20px 0;
}

.phonenumber {
float: right;
font-size: 22px;
font-weight: bold;
padding-top: 25px;
}

.clear {
clear: both;
}

This is used, so that the divs, where float is used, don't make an alignment issue.
